## List of figures

Figure 1 NSW commercial kangaroo management zones

1

### Background

The NSW Department of Planning and Environment (the department) and its predecessor agencies have been researching and monitoring kangaroo populations in New South Wales and managing the NSW Commercial Kangaroo Management Program (KMP) since the 1970s. During this time, in line with the best available science, adjustments have been made to the survey design, population estimation methods and the methods for calculating the commercial quota.

This 2023 Quota Report: NSW Commercial Kangaroo Management Program provides the commercial quotas for the 2023 kangaroo harvest in accordance with the Wildlife Trade Management Plan for the Commercial Harvest of Kangaroos in New South Wales 2022–26 (the plan).

The report provides the 2022 population estimates for red kangaroos, eastern and western grey kangaroos, and wallaroos, and the corresponding commercial harvesting quotas for 2023.

All historical data for trends in kangaroo management can be found in the appendix.

### Summary

The total quota available for allocation in 2023 is **1,850,228** kangaroos. There is also a maximum special quota of **178,233** that may be made available in specific circumstances (Table 1).

There are 15 commercial kangaroo management zones across New South Wales (Figure 1). Table 2 shows the 2023 quota by zone and species.

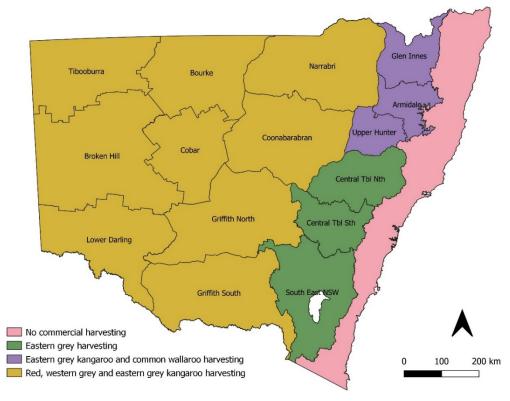

Figure 1 NSW commercial kangaroo management zones

Table 1 Population estimates for 2022, quotas, quota as percentage of population, maximum special quota for 2023, and 2022 quota for comparison

	Population estimates 2022	Quota 2023	Quota as percentage of population	Maximum special quota	Quota 2022
Red kangaroo	4,229,211	718,967	17.0%	63,438	619,932
Eastern grey kangaroo (Western Plains)	2,726,071	392,963	14.4%	40,891	358,835
Eastern grey kangaroo (Central and Northern Tablelands and South East Tablelands)	3,840,990	576,149	15.0%	57,615	574,202
Western grey kangaroo	720,327	107,307	14.9%	10,805	94,754
Wallaroo (Northern Tablelands) (2019 surveys)	365,616	54,842	15.0%	5,484	44,484
Total	11,882,215	1,850,228		178,233	1,692,207

 Table 2
 Quota by species and commercial kangaroo management zone

Zone name	Red kangaroo quota	Western grey kangaroo quota	Eastern grey kangaroo quota	Common wallaroo quota	Totals all species
Bourke	36,443	1,155	1,884		39,482
Broken Hill	296,849	18,429	13,346		328,624
Cobar	31,143	3,504	2,538		37,185
Coonabarabran	33,551	10,950	145,481		189,982
Griffith North	33,907	23,998	117,163		175,068
Griffith South	56,422	13,659	66,690		136,771
Lower Darling	113,407	35,282	15,851		164,540
Narrabri	58,705	-	28,690		87,395
Tibooburra	58,540	330	1,321		60,191
Northern Tablelands – Glen Innes			65,883	17,494	83,377
Northern Tablelands – Armidale			67,005	20,402	87,407
Northern Tablelands – Upper Hunter			39,098	16,946	56,044
Central Tablelands – North			116,602		116,602
Central Tablelands – South			73,240		73,240
South East Tablelands			214,320		214,320
Total all zones	718,967	107,307	969,112	54,842	1,850,228

Blue shading indicates a reduced quota % has been applied (10% of population estimate)

### Survey methods and population estimates

#### How surveys are conducted

Aerial surveys are used to assess kangaroo populations, annually on the Western Plains (fixed-wing aircraft surveys) and triennially on the Tablelands (helicopter surveys). Surveys are designed to suit the differences in terrain, and the species surveyed. The general underlying principles of the methodology are:

- 1. The aircraft flies at specified speed and height above the ground along a transect.
- 2. Trained aerial wildlife observers look through a frame or past a boom, each of which delineates the distance animals are from the transect line (for fixed-wing surveys these are: 0–50 m, 50–100 m, 100–200 m and 200–300 m).
- 3. Animals seen from the aircraft within delineated distances from a transect are recorded by the observer for analysis using a data logger.
- 4. Collected data are analysed to calculate an estimated population density in the areas surveyed.
- 5. The estimated density (e.g. the number of animals per km²) is multiplied by the area of the kangaroo management zone to calculate the population estimate.

#### Western Plains

The 9 commercial kangaroo management zones in the Western Plains of New South Wales cover an estimated 555,280 km² (see Table 12). Fixed-wing aerial surveys allow these areas to be surveyed quickly. The speed and height the plane must travel limits the time available for observers to detect, identify and record observations. Four observers independently record observations along the same transect, with 2 observers on each side of the aircraft. Observations are recorded onto a tablet computer by wildlife observers using data loggers. Customised software facilitates the recording of species (red kangaroo or grey kangaroo) group size (1, 2, 3 or 4) and distance class (0–50 m, 50–100 m, 100–200 m and 200–300 m). This system has been used since 2016 with benefits to data accuracy, data storage and methods of analysis.

#### Surveys and mark-recapture distance sampling

In keeping with advances in statistical analyses and survey methods, mark-recapture distance sampling (MRDS) is used to estimate the abundance of kangaroos in the Western Plains of New South Wales. This method allows for statistical consideration of the differences in detection between surveys, observers, species, group size, vegetation and other factors that may influence detection. It also accounts for kangaroos that are present during surveys but not counted.

MRDS combines 2 methods of surveying wildlife populations, line transect sampling and mark–recapture. Statistically reliable estimates of kangaroo abundance can be calculated using data obtained with the MRDS method. Differences in observations between front (mark or capture) and rear (recapture) observers shows variations between individuals. On its own, conventional line transect sampling by aerial survey is likely to overestimate detection probability and therefore underestimate kangaroo density.

Mark-recapture estimates derived from the aerial survey where 2 observers independently count animals along the same transect on both sides of the aircraft, is used to account for differences in detection probability between observers.

The combination of mark-recapture and line transect sampling combines the strengths of both methods, increasing precision and accuracy of population estimates.

#### 2022 population estimates

Table 3 shows the current estimated population and density of red and grey kangaroos in each of the Western Plains management zones.

Table 3 Density and population estimates for Western Plains kangaroo management zones, as surveyed in 2022

Management	Zone area	Red kan	garoo	Grey kar	igaroo
zone	(km²) * —	Density (per km²)	Population estimate	Density (per km²)	Population estimate
Bourke	55,019	3.9	214,369	0.6	30,385
Broken Hill	91,044	19.2	1,746,169	2.3	211,832
Cobar	40,419	4.5	183,195	1.0	40,278
Coonabarabran	61,711	3.2	197,356	16.9	1,042,877
Griffith North	65,758	3.0	199,456	14.3	941,071
Griffith South	64,126	5.2	331,894	8.4	535,660
Lower Darling	56,599	11.8	667,100	6.0	340,884
Narrabri	65,755	5.3	345,322	4.4	289,798
Tibooburra	54,849	6.3	344,350	0.3	16,510
Total	555,280		4,229,211		3,449,295

<sup>\* &#</sup>x27;Zone area' in this table excludes the national parks estate, forests and reserves, where harvesting is prohibited.

The estimated population sizes and densities of red and grey kangaroos in each Western Plains management zone from 1990 onwards are given in Tables 13 to 32.

#### Tablelands surveys

The 6 commercial kangaroo management zones in the NSW Tablelands cover 132,724 km². Each tablelands zone is surveyed once every 3 years using line transect sampling by helicopter. The Central, South East, and Northern Tablelands were most recently surveyed in 2020, 2021 and 2022 respectively.

Helicopter surveys are robust and scientifically rigorous. Each survey transect is randomised and stratified using information on kangaroo densities gained from the previous survey in each zone, and advances in software capability. A full report outlining the design of the survey and analysis of the results is available on the department's 'Kangaroo population monitoring and reporting' webpage (DPE 2022).

#### Northern Tablelands

The most recent Northern Tablelands survey was in September 2022. Table 4 shows the current estimated populations and densities of kangaroos in each of the 3 Northern Tablelands kangaroo management zones, based on the aerial surveys conducted in 2022. These zones will be next surveyed in 2025.

Historical population estimates, densities and quotas for Northern Tablelands kangaroo management zones are provided in Tables 33 to 38.

Table 4 Density and population estimates for Northern Tablelands kangaroo management zones, as surveyed in 2022

Management	Zone area	Eastern grey	kangaroo	Walla	roo
zone	(km²) * —	Density (per km²)	Population estimate	Density (per km²)	Population estimate
Glen Innes	18,449	23.8	439,220	6.3	116,624
Armidale	15,809	28.3	446,700	8.6	136,012
Upper Hunter	14,004	18.6	260,650	8.1	112,980
Total	48,262		1,146,570		365,616

<sup>\* &#</sup>x27;Zone area' in this table excludes the national parks estate, forests and reserves, where harvesting is prohibited.

#### South East Tablelands

About 25% of the total area of the South East Tablelands kangaroo management zone is not available for commercial harvest as it is either reserved for conservation or state forest, or the terrain is too difficult for harvesters to access. These areas are excluded from the survey.

Table 5 shows the current estimated population and density of eastern grey kangaroos in the South East Tablelands kangaroo management zone.

Table 5 Density and population estimates for eastern grey kangaroos within the South East Tablelands kangaroo management zone, as surveyed in 2021

Management zone	Area (km²)	Density (per km²)	Population estimate
South East Tablelands	40,705	35.1	1,428,800

Historical population estimates, densities and quotas for the South East Tablelands kangaroo management zone are provided in Table 39.

#### Central Tablelands

The 2 kangaroo management zones in the Central Tablelands were surveyed by helicopter in 2008, 2011, 2014, 2017 and 2020. The survey design utilises information from the previous survey in the delineation of low, medium and high population density strata, providing improved precision in the population estimates. The population estimates and densities derived from the 2020 helicopter survey are shown in Table 6. These zones will be next surveyed in 2023.

Table 6 Density and population estimates for the Central Tablelands kangaroo management zones, as surveyed in 2020

Management zone	Area (km²)	Density (per km²)	Population estimate
Central Tablelands North	24,396	31.9	777,350
Central Tablelands South	19,361	25.2	488,270
Total	43,757		1,265,620

Historical population estimates, densities and quotas for Central Tablelands kangaroo management zones are provided in Tables 40 and 41.

#### **Determination of quotas**

#### Commercial harvest quotas

The commercial kangaroo harvest quota is based on harvesting a proportion of the estimated population. Annual commercial harvest quotas are set at a proportion of the estimated kangaroo populations. For red kangaroos, quotas are generally set at 17% of the estimated population, and for eastern grey kangaroos, western grey kangaroos and wallaroos 15% of the estimated population. These proportions are specified in the plan.

Low kangaroo populations are further protected by the incorporation of harvest thresholds. The above percentages are reduced, or the harvest suspended (zero quotas) if the population of a species falls below the relevant threshold in that zone. Thresholds are set based on standard deviations relative to the long-term average population (Table 7).

#### Low population thresholds applicable for 2023

As discussed above, the plan protects low populations by requiring the commercial harvest quota to be either reduced or suspended, depending on the current population estimate relative to the long-term average. Thresholds have been set based on standard deviations, which are standardised measures that indicate how much a population varies from the long-term average population. A small standard deviation indicates the population does not vary by much from the long-term average, whereas a large standard deviation indicates the population varies more. Each species in each zone has its own thresholds.

To manage commercial harvest quotas, the thresholds are based on densities of kangaroos, calculated as the number of kangaroos per km<sup>2</sup> at the time of the aerial survey. There are 2 thresholds, representing increasingly significant population declines:

- Threshold 1 is set at 1.5 standard deviations below the average density
- Threshold 2 is set at 2.0 standard deviations below the average density.

If a population falls to below Threshold 1, but not as low as Threshold 2, the commercial harvest quota for the following year is calculated at 10% of the population rather than the usual 15% (greys) or 17% (reds). Reducing the quota will help the kangaroo population recover when the decline is not sufficient to warrant complete suspension of the harvest. If a population falls below Threshold 2, no commercial harvest quota is set for the following year.

The 2022 surveys mark 22 years since the survey method moved from 200 m to 100 m strip counts (Pople et al. 1998). It is also 22 years since helicopter surveys began in the tablelands. The last 22 years of survey data have been used to calculate thresholds that inform quotas for 2023. This time period is sufficiently long to determine population variance without relying on earlier data that were collected under several different methodologies.

#### Special quotas

The department may consider releasing a special quota where the annual commercial harvest quota for a species in a commercial kangaroo management zone has been fully issued. This is not an automatic decision. The special quota aims to minimise the number of kangaroos shot under non-commercial licences by allowing increased commercial use of kangaroos that would otherwise be shot and left in the field. In deciding whether to release a special quota, the department will consult the Kangaroo Management Advisory Panel and consider local conditions, climatic trends, population trends and Western Lands de-stocking orders to ensure populations can remain viable with increased harvesting.

A special quota for 2023 has been calculated in accordance with the plan (Table 1). When used, special quotas will be set at a maximum of 5% of the population estimate of each kangaroo species in any one zone, and a maximum of 1.5% of the population of each species across all zones.

Special quotas will not be allocated where the commercial harvest is reduced or suspended due to low populations.

Table 7 2022 density estimates, compared to long-term averages and thresholds for quota reduction and suspension

Western Plains zone	Tibooburra	Broken Hill	Lower Darling	Cobar	Bourke	Narrabri	Coonabarabran	Griffith
Grey kangaroos (eastern and western g	reys)							
Long-term average density	1.4	3.7	5.1	5.4	3.6	11.3	19.5	7.0
Threshold 1: 10% quota	0.3	1.8	2.6	0.9	0.8	4.7	9.7	3.6
Threshold 2: suspension of quota	0.2	1.4	2.1	0.5	0.5	3.5	7.7	2.9
<b>2022 density estimate</b> (kangaroos/km²)	0.3	2.3	6.0	1.0	0.6	4.4	16.9	11.4
Red kangaroos								
Long-term average density	10.3	12.0	5.3	3.8	5.4	4.8	4.4	2.9
Threshold 1: 10% quota	3.7	7.1	2.3	1.5	2.3	2.1	2.2	1.5
Threshold 2: suspension of quota	2.6	5.9	1.7	1.1	1.8	1.6	1.8	1.2
<b>2022 density estimate</b> (kangaroos/km²)	6.3	19.2	11.8	4.5	3.9	5.3	3.2	4.1

Blue shading indicates a reduced quota % has been applied (10% of population estimate)

#### Zones impacted by a reduced or suspended quota in 2022

The density of grey kangaroos in Tibooburra, Bourke and Narrabri was estimated to be 0.30, 0.55 and 4.41 respectively (Table 7). This places greys between the upper and lower thresholds for those kangaroo management zones. Consequently, they will have a reduced 10% quota for eastern greys (Tibooburra, Bourke and Narrabri zones) and western greys (Tibooburra and Bourke zones only) (Table 7).

Narrabri has only a very small population of western grey kangaroos because the zone is at the eastern edge of their range. No quota is set for western greys in this zone.

Quotas by species and zone are shown in Table 2 above.

#### Thresholds for new zones – Griffith North and Griffith South

The commercial kangaroo management area was expanded in 2020 to take in the former Wagga Wagga non-commercial zone to provide landholders with additional options to manage kangaroo numbers. Expanding the Griffith zone to include the new area increased it from 98,171 to 129,884 km². To achieve more refined management, this area was divided into the 2 new zones of Griffith North (65,758 km²) and Griffith South (64,126 km²).

As the Griffith North and South zones have only 2 years of population survey data, thresholds for these zones are determined by using the long-term data of the former Griffith zone.

Assuming the estimated long-term densities in the former Griffith kangaroo management zone are representative of the long-term densities of kangaroos in the new zones, the thresholds calculated for the new zones will be similar to the former Griffith zone (Table 8).

 Table 8
 2022 density estimates and thresholds for Griffith kangaroo management zone

Management zone	Species		Lower threshold (kangaroos/km²)	Density 2022
Griffith	Red kangaroo	1.50	1.21	4.09
	Grey kangaroo	3.59	2.87	11.36

There will be no reduction in harvest rates for any species in Griffith North or Griffith South kangaroo management zones in 2023.

#### Thresholds for tablelands zones

Density thresholds for each of the tablelands kangaroo management zones are shown in Table 9 (for eastern grey kangaroos) and Table 10 (for wallaroos). Current population densities are above the upper thresholds; therefore, a normal 15% quota is set for each of these species and zones.

Table 9 Average and current density estimates, and density thresholds for quota reduction and suspension, for eastern grey kangaroos in the tablelands

Tablelands zone	Armidale	Glen Innes	Upper Hunter	Central Tablelands North	Central Tablelands South	South East Tablelands
Eastern grey						
Long-term average density	16.0	17.4	9.9	34.6	30.3	19.7
Threshold 1: 10% quota	7.9	8.5	4.8	15.3	16.6	7.3
Threshold 2: suspension of quota	6.2	6.7	3.7	11.6	13.6	5.3
2022 density estimate (kangaroos/km²)	28.3	23.8	18.6	31.9	25.2	35.1
Last survey year	2022	2022	2022	2020	2020	2021

Table 10 Average and current density estimates, and density thresholds for quota reduction and suspension, for wallaroos in the Northern Tablelands

Northern Tablelands zone	Armidale	Glen Innes	Upper Hunter
Wallaroo			
Long-term average density	4.3	3.8	3.9
Threshold 1: 10% quota	1.8	1.5	1.3
Threshold 2: suspension of quota	1.3	1.1	0.9
2022 density estimate (wallaroos/km²)	8.6	6.3	8.1
Last survey year	2022	2022	2022

#### New commercial harvest zones

No new zones have been added to the 2022 harvest area.

#### Proposed changes to quotas

For 2023, the department does not propose to set quotas that are higher than those specified in the plan.

In accordance with the provisions of the plan, as shown in Table 11 below, the department has:

- reduced the harvest quota for eastern grey kangaroos in Tibooburra zone to 10%
- reduced the harvest quota for western grey kangaroos in Tibooburra zone to 10%
- reduced the harvest quota for eastern grey kangaroos in Bourke zone to 10%
- reduced the harvest quota for western grey kangaroos in Bourke zone to 10%
- reduced the harvest quota for eastern grey kangaroos in Narrabri zone to 10%.

No quota is set for western grey kangaroos in the Narrabri kangaroo management zone because it has only a small population due to it being the eastern edge of their range.

Table 11 Zones with suspended or reduced quotas in 2023

Management zone*	Species	Status
Tibooburra – Zone 01	Eastern grey	Reduced (10% quota)
	Western grey	Reduced (10% quota)
Bourke – Zone 07	Eastern grey	Reduced (10% quota)
	Western grey	Reduced (10% quota)
Narrabri – Zone 08	Eastern grey	Reduced (10% quota)

<sup>\*</sup>This table does not include all zones with quotas set as per the summary table. It shows only zones with suspended or reduced quotas, or zones that have reopened from last year.

#### Non-commercial culling

Non-commercial culling is available to landholders throughout New South Wales to help manage the impact of kangaroos on their land. Maximum culling limits are set annually, based on the same population survey data that is used for the setting of commercial kangaroo harvest quotas. Maximum culling limits are set according to property size for the same 4 species subject to commercial kangaroo harvesting (eastern grey, western grey and red kangaroo, and wallaroo). For all other kangaroo species, and where property size is less than 20 hectares, culling limits are determined on a case-by-case basis.

Non-commercial culling limits can be found on the department's 'Licences to harm kangaroos' webpage (DPE 2022b).

Changes to non-commercial licence conditions were implemented in the 2018 NSW Government Drought Relief Package. The intention was to maintain animal welfare standards and ecologically sustainable kangaroo populations.

The changes included:

- introducing ecologically sustainable limits on the number of kangaroos that may be culled, based on property size
- processing licence applications over the phone for previous and current licence holders
- increasing limits on shooters to operate under each licence
- reduced red tape on provision of shooter details to the National Parks and Wildlife Service (NPWS)
- removal of the use of carcass tags (drop tags)
- removal of the 'shoot and let lie' licence condition to reduce biosecurity risks by allowing landholders and shooters to use carcasses for non-commercial purposes.

### Appendix A. Tables

#### Kangaroo management zone areas

Table 12 Area of each kangaroo management zone

Management zone	Area (km²)
Western Plains	
Bourke	55,019
Broken Hill	91,044
Cobar	40,419
Coonabarabran	61,711
Griffith North	65,758
Griffith South	64,126
Lower Darling	56,599
Narrabri	65,755
Tibooburra	54,849
Total Western Plains zones	555,280
Tablelands	
Armidale	15,809
Glen Innes	18,449
Upper Hunter	14,004
Central Tablelands North	24,396
Central Tablelands South	19,361
South East Tablelands	40,705
Total Tablelands zones	132,724
Total kangaroo management zone area (all zones)	688,004

#### Notes to the tables that follow

For Western Plains zones only:

- dark shading indicates the use of 100 m correction factors from September 2001; light shading indicates 200 m correction factors for surveys using fixed-wing aircraft, as described in the section on 'Survey methods and population estimates'
- in 2016 and 2017 the long East–West transects that had been used in previous years were flown but data collection and analysis changed to MRDS
- in 2018 the sampling design changed to zigzag transects within randomly placed 50 x 20 km blocks. MRDS was used for data collection and analysis
- from 2016 the rows will be clear (no shading) indicating the MRDS method of surveying.

For all tables, '% population' refers to the commercial harvest quota as a proportion of the previous year's population estimate, upon which the quota is set.

Tablelands management zones are surveyed by helicopter on a 3-yearly cycle. Population estimates remain the same for the intervening period.

### Kangaroo management zone no. 1: Tibooburra

 Table 13
 Red kangaroo temporal variation – Tibooburra

Year         Population         Density         % change         Quota         % population           1990         1,004,500         18.3         -10.6         161,900         14.4           1991         1,468,600         26.8         46.2         149,200         14.9           1992         845,000         15.4         -42.5         337,800         23.0           1993         1,230,319         22.4         45.6         135,200         16.0           1994         1,103,648         20.1         -10.3         221,457         18.0           1995         1,078,399         19.7         -2.3         139,300         12.6           1996         1,009,295         18.4         -6.4         141,100         13.1           1997         1,673,668         30.5         65.8         132,800         13.2           1998         1,576,827         28.7         -5.8         190,900         11.4           1999         925,897         16.9         -4.13         104,570         6.6           2000         927,889         16.9         0.2         107,300         11.6           2001         1,389,398         25.3         49.7         106,200	V	D 14		0/ 1		0/ 1.1
